A comparison of the use of different types of midazolam tablet in a short psychotherapeutic intervention in ambulant patients. A comparison was made of the use of two different types of midazolam, a short-acting form and a long-acting form, in a standardized psychotherapeutic intervention lasting 1 hr. Of the 18 adult patients examined, five were given midazolam-long acting (regular form), while 13 were given midazolam-short acting (pro-sparin form). Psychological tests revealed no significant differences between the two forms. Both forms had an acceptable sedation level. The time taken for clinical improvement and for the loss of amnesia were about the same for both forms, while the loss of sedation was faster with the midazolam-short acting (pro-sparin form).

Civilization IV I had a computer crash in my apartment and lost all my files, so I don't have the savegames for this one anymore, but it has an amazing AI and is a blast to play.

Day of the Tentacle This is a side scrolling adventure game that was done on the Gameboy and for the PC. Has cartoonish graphics and is a lot of fun to play.

As we know, layers in AutoCAD are a combination of groups, symbols, and text. The current behavior is that when a group is selected, the layer style is inherited from the layer that contains the group. For example, if a group of vertices are selected, the layer style of the surface they are selected on is applied to the vertices. You will now see the expected behavior of the style for the selected elements.
